

SERVICE MANUAL & TECHNICAL BULLETIN

MODEL 1F4 SERIES (VEHICLE)

INTRODUCTION

This service manual has been prepared to provide necessary information concerning the maintenance and repair procedures for the NISSAN FORKLIFT 1F4 series.

Any changes effected in the series after publication of this service manual will be announced in a technical bulletin. It is, therefore, recommended that each relevant technical bulletin be inserted in front of each section and be used together with the service manual as a reference.

If a new model requires different service method or has undergone a major change, revised sections will be issued to replace the applicable sections. Each revised section will include the description of how to service the parts for the former specifications. The publication of a revised section will be announced in the technical bulletin.

This service manual consists of eight sections as shown in the following table, which gives the updated symbols. When a revised service manual is issued, this "INTRODUCTION" sheet should be replaced with a revised one.

Section	Symbol

LM	LOADING MECHANISM	Service data and specifications (SDS), Trouble diagnosis, Service information, Fork, Lift chain, Carriage assembly, Mast assembly	
FE	ENGINE CONTROL, FUEL & EXHAUST SYSTEMS	Engine control system, Throttle cable (TD42 engine model), Accelerator pedal, Fuel system, Cooling system, Exhaust system, Intake system, Overhead muffler system (Option)	
VC	VEHICLE CONTROL SYSTEM	Vehicle control system, Combination meter, Vehicle control module, Unit inspection and adjustment, VCM setting	
BF	BODY & FRAME	Service data and specifications (SDS), Removal and installation	
BE	BODY ELECTRICAL SYSTEM	Wire harness, Relay box (TB45 engine only), Fuse box, Combination meter, Switches, Lamps, Other parts	

Description

This manual contains the information on methods required to perform appropriate maintenance. This main text describes removal, disassembly, inspection, assembly, installation, and adjustment procedures of units. Step-by-step descriptions or service points are provided for these procedures. Illustrations, values, tightening torques and SSTs are also provided as required.

Technical Term Definitions SPECIFIC TERMS

WARNING:

Warns you of instructions that must be followed to prevent severe personal injury and/or fatal accident.

A CAUTION:

Warns you of instructions that must be followed to prevent personal injury and/or damage to some parts of the vehicle.

NOTE:

Provides helpful information to perform a smooth and effective service procedure.

Standard value or specifications:

The allowable range for a given measured value during inspection and adjustment.

Limit value:

The maximum or minimum acceptable measured value during inspection and adjustment.

LOCATING DIRECTIONS

The direction (front, rear, left, right, upper, lower) shown in this manual shows the direction when sitting in the driver seat facing frontward.

Technical Term Definitions (Cont'd) MEASURING UNITS AND VALUES

Specified torque, pressure, force and other values used in this Manual are primarily expressed as the SI unit (International System of Unit). The values following the SI unit and enclosed in parentheses () are expressed in the metric system and in the yard/pound system.

Example: Tightening torque: 9 - 12 N•m (0.9 - 1.2 kg-m, 6.5 - 8.7 ft-lb) SI unitMetric systemYard/pound system

Main unit conversions:

	SI unit	Metric system	Yard/pound system	Conversion factor to SI unit
Torque and	N•m	kg-m	-	9.807
moment	14-111	_	ft-lb	1.356
Force	N	kg	ı	9.807
		_	lb	4.448
Pressure	kPa	kg/cm ²	-	98.07
		_	psi	6.895
	MPa	kg/cm ²	-	0.0981
		_	psi	0.0069

NOTE:

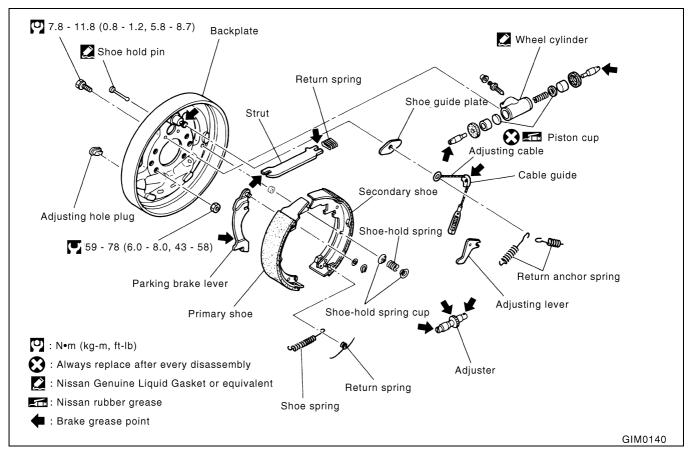

Converting the unit in metric system or yard/pound system to SI unit is shown below.

Unit in metric system or yard/pound system x conversion factor = SI unit

HOW TO USE THIS MANUAL

Manual Illustrations EXPLODED VIEWS

These contain part names, tightening torques, lubrication points and other information necessary to perform removal, disassembly, repair, reassembly and installation procedures. (See example below.)

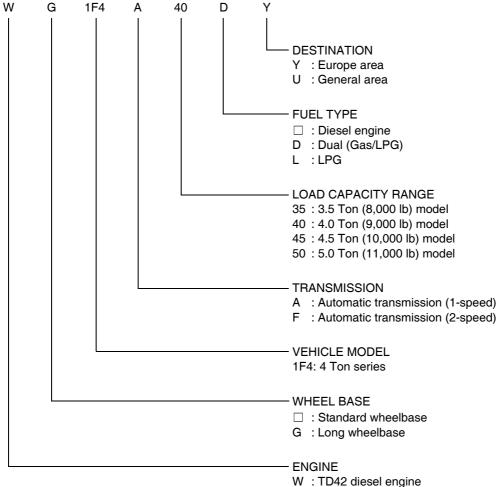

Symbols used in exploded views

Symbol	Meaning	Symbol	Meaning
(0)	Specified tightening torque is required for part installation. When a torque range is given, use the average figure as the standard.	8	Always replace after every disassembly.
4	Should be lubricated with specified grease.	*	Select parts of proper thickness.
	Should be lubricated with oil.	☆	Adjustment is required.
2	Should be lubricated with sealing.		

IDENTIFICATION INFORMATION

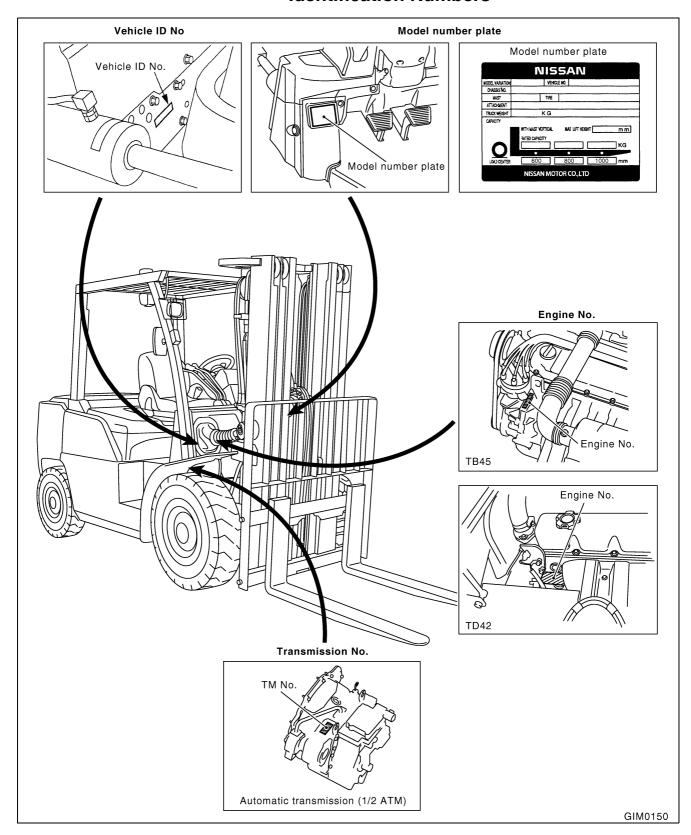

Vehicle Model Classification Number

J : TB45 dual engine, LPG engine

IDENTIFICATION

Identification Numbers

General Precautions

Please read and thoroughly understand this section as well as the reference "Precautions".

- Lifting and hoisting work should be performed by persons who have completed slinging skills training or hoisting skills training.
- Make sure that the work area is well ventilated and free of flammable materials.
- If work must be performed in an area having poor ventilation, sufficiently ventilate the area ahead of time.
- When handling flammable or hazardous materials, take sufficient steps to prevent the occurrence of a fire or disaster.
- Do not smoke when working.
- When working with hot parts, rotating parts, and sliding parts, be careful not to get burned or injured.
- When working near a running engine, be careful not to touch rotating or sliding parts.
- Each unit is heavy, so watch your footing when working.
- When performing maintenance, set the parking brake and turn the ignition switch OFF.
- Electrical circuits can short, therefore, before disassembling and inspecting, remove rings and other metal items from your body.
- Make an efficient repair by performing the diagnosis after sufficiently understanding the symptoms of the malfunction. Then after the work is completed, make sure that everything is working properly.
- Before performing removal or disassembly work, be thoroughly familiar with the properly assembled condition.
- When necessary, affix matching marks to parts that will not affect performance.
- Before removing wiring, memorize the wire colors and wiring conditions.
- When performing disassembly and inspection work, use the specified tools or tools that are appropriate for the task.
- When performing disassembly and inspection work, use clean tools. When a part has been removed, place it in a clean location.
- Organize removed parts in proper order so that they do not get mixed up.
- Before removing piping and hoses that are under pressure, release the pressure.
- Before removing the engine and counterweight, block the tires. Do not jack up the vehicle.
- Before inspecting or assembling parts that have been disassembled, clean and wash them.
- Use the specified nuts and bolts, and tighten them to the specified torque when assembling.
- After removing oil seals, gaskets, packing, O-rings, lock washers, cotter pins, and self-locking nuts, replace them with new ones as indicated in the relevant provisions (non-reusable parts). When replacing a part, refer to the parts catalog issued by Nissan Motor Co. and use the part that has the same part number (genuine NISSAN part).
- Replace inner and outer races of tapered or needle roller bearings as a set.
- Use the specified lubricant and sealing agent.

General Precautions (Cont'd)

- Do not allow brake fluid to adhere to the body and other painted surfaces. If such fluid gets on a painted surface, quickly wipe it off and wash with water.
- Do not reuse brake fluid that has been removed.
- After repairing the hydraulic or brake system, closely inspect for leakage.
- Do not recklessly release waste oil following an oil change, or treated oil used for parts. Dispose according to the method established by law.
- Before performing maintenance, disconnect the battery ground cable and battery positive (+) cable.
- If, with electronic control specifications, a part is to be welded to a unit later on, disconnect both of the battery cables (+ and -) before welding. (This action prevents current from circling into the ECM.)

PRECAUTIONS RELATED TO ELECTRICAL SYSTEM INSPECTIONS

- Do not pry connectors when inserting or withdrawing them. Such actions can cause poor contact.
- When withdrawing a connector, do not pull on the wire (cable) itself
- When conducting an inspection with a circuit tester, use the correct range (A, V, Ω) and polarity (+, -).
- When the task is completed, reconfirm that the wiring is connected in its original location.

PRECAUTIONS RELATED TO BATTERY HANDLING

A WARNING:

- · Keep sources of fire away from batteries.
- To keep from getting burned, do not allow battery fluid to get on your skin or clothing.
- If a large amount of battery fluid spills or leaks out, immediately neutralize it with a neutralizing agent (such as baking soda, calcium hydroxide, or sodium carbonate) and wash it away with a large amount of water.
- Do not leave tools or other metal objects on the battery, because contact with a terminal can cause a short, burning anyone nearby, or hydrogen gas emitted from the battery can ignite and explode.
- If static electricity is produced, a battery can explode.
 Therefore, do not wipe or dust off the battery's top surface or terminal areas with a dry cloth or duster, and do not cover with a vinyl cover. Use a damp cloth to clean the battery.

A CAUTION:

- Leaking battery fluid can cause corrosion, therefore, securely close the battery fluid cap.
- Do not allow a person to inspect a battery if that person does not understand how to properly handle batteries.

Precaution

A CAUTION:

- Do not go under forks or a forklift when cargo handling gear or travel gear is being operated during maintenance and inspection work.
- Work on flat, level, hard surfaces.
- Be properly seated in the driver's seat when operating ignition switches and levers.
- Engage the parking brake when working.
- Do not use square timbers that have been piled on each other.
- Use square timbers that have sufficient strength to support the vehicle's weight.
- Do not use square timbers that are cracked or chipped. This can be dangerous, because the vehicle may tip.
- Do not place square timbers of different heights under the left and right sides of the mast or vehicle body. The vehicle will tilt.

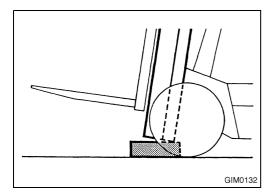

Jacking

A CAUTION:

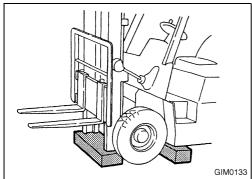

- If the front wheels are lifted off the ground with the mast and left for a long period of time, the mast may gradually tilt back. Therefore, place a square timber under the front of the frame on the left and right sides, leaving no gaps.
- Use square timbers having the following dimensions: a height that barely enables them to be inserted between the ground and mast when tilted back, longitudinal (front-toback) dimension that is 50 to 100 mm (1.97 to 3.94 in) larger than the longitudinal dimension of the mast rail of the outside mast, and lateral (left-to-right) dimension that is 20 to 40 mm (0.79 to 1.57 in) larger than the outside dimension of the outer mast.
- When jacking a vehicle, stop when the tire is slightly raised from the ground.

FRONT

- 1. Raise the forks 200 to 300 mm (78.7 to 11.81 in) from the ground, and tilt the mast completely back.
- 2. Place a square timber under the mast.

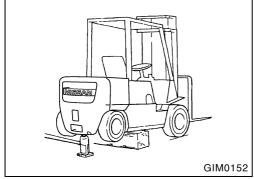

JACKING AND LIFTING

GIM0151

Jacking (Cont'd)

- Tilt the mast forward until the front wheels lift up.
- Place a square timber under the left and right frame.
- Block the rear wheels. 5.

REAR

- Raise the forks about 100 mm (3.94 in) from the ground, and tilt them slightly back.
- Block the front wheels.
- Place a garage jack under the counterweight center, and then jack it up.

Jack up until the tires are slightly raised from the ground, place a square timber under the left and right frame, and then slowly lower the jack.

Lifting

A CAUTION:

- Do not hoist a forklift higher than is necessary.
- Nylon slings, wires, and other materials used for hoisting must be damage-free and strong enough to satisfactorily handle the weight of the forklift.
- Place hoisting accessories in designated locations only.
- Square timbers must be strong enough to satisfactorily handle the weight of the vehicle.

FRONT

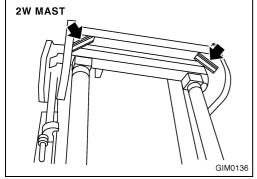

- 1. Block the rear wheels.
- 2. Attach a wire to the crossbeam of the outer mast, and lift using a hoist
- 3. Place a square timber under the left and right frame.
- 4. Gradually lower the forklift, supporting the forklift with the square timber. Make sure that the square timber does not slip out of position at this time.
- 5. Rock the forklift to make sure that the body is securely supported.

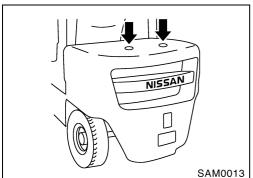

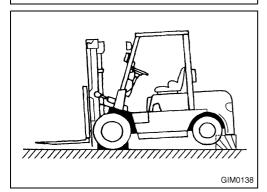

- 1. Raise the forks about 100 mm (3.94 in) from the ground, and tilt them slightly back.
- 2. Block the front wheels.
- 3. Utilizing the holes to the left and right of the counterweight, lift using a hoist.

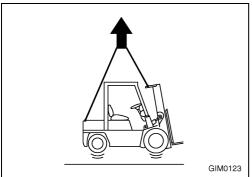

- 5. Gradually lower the forklift. Make sure that the square timber does not slip out of position at this time.
- 6. Rock the forklift to make sure that the body is securely supported.

ENTIRE FORKLIFT

Utilizing the outer mast crossbeam and counterweight holes, attach a wire and then lift.

A CAUTION:

Make sure that the wire does not interfere with the head guard.

TIGHTENING TORQUE OF STANDARD BOLTS

Tightening Torque

Grade Nominal diameter (mm)	Nominal diameter	Pitch (mm)	S	Specified tightening torque		
	(mm)		(N•m)	(kg-m)	(ft-lb)	
	M6	1.00	3 - 4	0.3 - 0.4	2.2 - 2.9
